Network Administrator

Position ID: 2016 – E – 205

Position Location: Washington Metro Area

Duration of Position: Full-Time

Need Date: Immediate

Intelligence Consulting Enterprise Solutions, INC. is looking for a Network Administrator.

Description:

The candidate is responsible for installing, configuring, and maintaining network equipment in support of business processing requirements. Performs software installations and upgrades to network operating systems. Schedules installations and upgrades and maintains them in accordance with established IT policies and procedures. Monitors and tunes the network to achieve optimum performance levels. Ensures network integrity by evaluating, implementing, and managing appropriate software and hardware changes and solutions. Ensures network redundancy and recoverability by reducing single point of failure. Evaluates current systems. Works on complex problems where analysis of situation requires in-depth evaluation of various factors. Plans large-scale network projects through vendor comparison and cost studies. Conducts network architecture assessments. Assists and advises government with technical design to support network acquisition specification, design, proof-of-concept prototyping, development and evaluation of network management systems.

Required Qualifications:

- Bachelor's degree in systems engineering or related science or engineering field
- 5+ years of System Administration/System Engineering Integration of large, complex systems
- 5+ years of development or administration of security appliances, network equipment or secure operating systems
- Proven ability to utilize systems engineering techniques and principles to determine technical security engineering requirements within complex systems
- Demonstrated experience in working highly visible, major government project engineering and integration activities
- Experience in strategic and technical planning
- Knowledge of DIA portfolio's
- Experienced associated with IC agencies and the DoD
- Excellent customer relationship and presentation skills
- TS/SCI clearance

Desirable Qualifications:

- Advanced degree in a technical field
- Experience developing and implementation planning of complex systems or enterprises
- Professional certification, commensurate with experience and compliant with DoD 8570
- Knowledge of agile engineering
- Demonstrated and experience with intelligence systems

- Demonstrated operational experience with intelligence systems
- Knowledge and experience with security engineering policies and procedures supporting DCID 6/3 and ICD 5023
- Experience associated with security engineering and system development integration

Ideally, this individual will have broad knowledge of the NGA and other Intelligence Community (IC) architectures and missions, both current and future. Additionally, strong communication skills are required for both customers. This individual should be able to work independently and proactively communicate with the rest of the team.
