Systems Integrator / Legacy Retirement Engineer

Position ID: 2016 – S– 116

Position Location: Chantilly, VA, St. Louis, MO

Duration of Position: Full-Time

Security Clearance: TS/SCI Clearance REQUIRED

(Active SCI within 2 years; SSBI current within 5 years)

Need Date: Immediate

Intelligence Consulting Enterprise Solutions, INC. is looking for a Systems Integrator - LRE.

Description:

The Legacy Retirement Engineering effort provides systems engineering to merge, or remove, redundant and obsolete mission services with the objective of reducing agency operations and sustainment costs. The LRE team has the need for an experienced systems integrator to lead the enterprise transformation of mission capabilities in support of the customer's budget-driven need for higher efficiency.

Reporting to the LRE Project Lead, the Systems Integrator is accountable for project engineering, technical integration, baseline management, and systems closure.

Responsibilities include the following:

- Conduct capability analyses and maintain a mapping of enterprise services
- Provide recommendations for systems retirement based on cost benefit analyses
- Engineer the decomposition of mission systems into discreet services
- Develop and maintain an enterprise roadmap of migrating capabilities
- Translate service capabilities into features for execution by software developers
- Develop Requests for Change (RFCs) as required and lead configuration control board process coordination
- Engage with internal and external organizations to develop and execute time-phased epochs for migrating services to the operational baseline
- Generate transition planning documentation and coordinate stakeholder participation
- Lead or participate in technical exchange meetings (TEMs) to serve as focal points for managing project execution and resolving enterprise issues
- Maintain online dashboard of team project status and activities
- Compile and deliver weekly, monthly, and ad hoc project status and activity reports to include team plans, schedules, accomplishments, and risks/issues.

Required Qualifications:

- Bachelor's degree in engineering, or related technical field, or equivalent experience
- 6+ years of systems engineering, systems integration, or systems development experience
- 1+ years of related experience with NGA or its IC partners
- 1+ years of experience in requirements engineering, interface engineering, and/or transition planning and execution

[Apply for this job](#)

- Experience in project engineering
- Demonstrated ability to establish effective customer relationships with senior level government personnel
- Demonstrated ability to develop and present effective technical presentations to senior management; must possess strong written and verbal communications skills

Desired Qualifications:

- 2+ years of experience as a systems of systems integrator
- 2+ years of experience in software engineering, or software development
- 2+ years technical experience supporting NSG systems, segments, and architectures
- 1+ years of experience agile systems engineering and development methods (User Story Generation, Sprint/Scrum Development, Development Back-log management)
- 1+ years of experience with cloud technology engineering
